Automated Network Request Management System

The **Automated Network Request Management System** streamlines the process of requesting network connections and office relocations by replacing manual email-based workflows with a centralized ServiceNow solution. Employees can submit requests through a user-friendly self-service portal, while automated approvals and backend integration ensure accurate data, faster processing, and real-time status tracking. This reduces manual effort, minimizes errors, and ensures network services are ready when employees move to their new workspaces.

S.No.	Parameter	Description
1	Problem Statement	Employees face delays and errors when requesting network provisioning or desk relocations due to manual emails, incomplete information, and lack of request tracking.
2	Idea / Solution	Develop a ServiceNow-based application with a self-service catalog, auto-filled user details, dynamic UI policies, mandatory validations, Flow Designer approvals, and automatic storage of approved requests in u_network_database .
3	Novelty Uniqueness	Separates request processing from permanent data storage, validates information before submission, and automates approvals to eliminate manual errors and improve data accuracy.
4	Social Impact / Customer Satisfaction	Provides a simple, transparent, and user-friendly experience, reducing delays, improving communication, and ensuring employees receive timely network connectivity.
5	Business Model / Value	Reduces operational costs by minimizing manual work, improving IT team productivity, and enabling faster service delivery with fewer errors.
6	Scalability	Built on the ServiceNow cloud platform, allowing the solution to support multiple offices, large user volumes, and future expansion into broader IT and asset management services.
