

Ideation Phase

Brainstorm & Idea Prioritization Template

Date:	22 June 2026
Name:	Lakshmi G
Project Name:	Automated Network Request Management System
Maximum Marks:	4 Marks

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Team Gathering: A cross-functional workshop was established involving the ITSM Platform Administrator, Lead Network Infrastructure Engineer, Network Security Analyst, and Service Desk Operations Manager. Pre-work materials covering current firewall, VLAN, and VPN manual ticketing bottlenecks were distributed 48 hours prior to the session.

Set the Goal: Define an intake mechanism within ServiceNow that standardizes incoming data, removes manual sorting, and enforces security compliance out of the box.

Learn to Use the Facilitation Tools: The team utilized a digital collaboration canvas to map out ideas in real-time, prioritizing volume of creative ideas over initial constraints.

Step-2: Brainstorm, Idea Listing and Grouping

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

🕒 10 minutes to prepare

🕒 1 hour to collaborate

👥 2-8 people recommended

➔ Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

🕒 10 minutes

A Team gathering

Define who should participate in the session and send an invite. Share relevant info or pre-work ahead.

B Set the goal

Think about the problem you'll be focusing on solving in the brainstorming session.

C Learn how to use facilitation tools

Use the Facilitation Superpowers to run a happy and productive session.

1 Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

🕒 5 minutes

PROBLEM

How might we [your problem statement]?

Key rules of brainstorming

To run a smooth and productive session

- ☐ Stay in topic. ☐ Encourage wild ideas.
- ☐ Defer judgment. ☐ Listen to others.
- ☐ Go for volume. ☐ If possible, be visual.

Cluster 1: Form Experience & End-User Usability (Dynamic Front-End)

Idea: Use Catalog UI Policies to keep the form clean, showing fields like If anything else, please specify only when Types of devices matches Others. Use native reference auto-population settings to instantly fetch the logged-in user's profile details (Email Id, Phone Number) without writing client-side code. Embed explicit tooltips and suggestion placeholder text directly inside variable inputs.

Cluster 2: Workflow Automation & Access Control (Logic Engine)

Build a multi-layered Flow Designer blueprint that sequentially asks for Manager Approval first, followed by Network Security group authorization for high-sensitivity actions. Apply conditional branch logic inside the flow execution path to parse if the state returns Approved or Rejected. Auto-generate systematic activity history and tracking logs within the parent record.

Cluster 3: Data Architecture & Scaling (Backend Data Model)

Establish a robust, dedicated custom schema platform (u_network_database) containing fields for access levels, device types, justifications, and relocation targets. Configure access control lists (ACLs) to ensure only authorized fulfillment groups and approvers can view internal network configurations

Step-3: Idea Prioritization
