Customer Problem Statement :

To build an experience people will love, we must understand the core challenges from our users' point of view. Below is the structured breakdown of the primary customer pain points using your template framework.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1 (<i>The Corporate End-User Perspective</i>)	An enterprise employee who relies heavily on fast connectivity for laptops, mobile devices, and physical hardware relocations.	Submit a request for a new network connection or device relocation quickly through the IT portal.	The current process requires filling out generic IT tickets with no dynamic validation, resulting in frequent follow-up questions.	The form doesn't automatically pull my profile data or hide irrelevant questions based on my chosen device type.	Frustrated, delayed, and unsupported by internal IT services due to administrative overhead.
PS-2 (<i>The Network Operations Engineer Perspective</i>)	A fulfillment engineer responsible for incoming infrastructure requests, verifying security compliance, and deploying configurations.	Process incoming network access change requests efficiently to maintain corporate SLA targets.	I spend a massive amount of time tracking down manager approvals over chat.	There is no dedicated capturing structured network variables, and approvals are not automated via Flow Designer.	Overwhelmed and unproductive due to excessive manual data sorting and legacy, un-automated workflows.

Customer Problem Statement Mapping (PS-1)
