Empathy Map Breakdown

The following data sets map out the behavioral and attitudinal patterns of the corporate end-user attempting to request network provisioning.

1. Think & Feel

What should my network device priority level be?

Why is ordering a simple relocation so annoying?

I hope my manager approves this before my hardware arrives next week.

I don't want to get stuck answering complex technical questions from the network team.

2. Hear

"Make sure you detail every single IP range manually."

"The network queue is backed up; it might take a week."

"Just open a generic IT ticket and ask them to forward it."

3. See

Generic, cluttered IT forms with dozens of non-mandatory fields.

No direct, real-time status tracking dashboard on the main Service Portal.

Constant email pings asking for configuration clarifications.

4. Say & Do

Manually types down full email ID and phone numbers into the form every single time.

Selects "Others" as the device type but finds no follow-up box to explain the request.

Abandons unfinished, confusing draft tickets out of frustration.

5. Pain

Hard to navigate complex infrastructure options.

Significant delays due to static, un-automated approval workflows.

Uncomfortable with technical jargon required on basic connection requests.

6. Gain

Comfort: Simple, clean, dynamic dropdown selections that populate instantly.

Accuracy: Auto-filled user information using native platform reference links.

Hands-on Workshop Canvas

The following image represents the collaborative workshop environment during the active mapping session. It captures the dynamic placement of user insights using clean color variations to eliminate heavy dark outlines and provide a realistic workspace feel.
